# Introduction

## Problem Statement

Collectors of niche items lack a dedicated marketplace platform where they can digitally track their collections and easily trade with other collectors. Currently, such collectors need to constantly monitor various e-commerce platforms such as eBay and Gumtree where they often spend considerable time searching for specific niche items.

Collectr.com solves this problem by providing a dedicated specialised website where collectors can congregate and trade.

## Definitions

There are several terms specific to the application context and the activity of collecting that need to first be defined before proceeding with the requirements specification. They include:

- **Items:** Objects that the collector has or would like to obtain for a particular set of collections. For example a Charizard card for a Pokemon Collector or a Coldplay album for a Music Collector
- **Collections:** An official group of items sharing a common topic. For example a collection of all existing Kanto Region Cards or a collection of all albums and merch by Coldplay.
- **User Collections:** A group of items owned by a user sharing a common topic which is always a subset of a collection. A user can have many collections where each collection represents a unique topic
- **Collector:** An individual who is interested in collecting items for a particular set of collections. For example, a Kanto Region Card Collector might like to collect all Pokemon cards related to the Kanto region. All users are ultimately collectors regardless of their privileges on the website.

- **Master Set:** Refers to all the niche items recognized in the application's database as official collections. It defines what items collectors can conveniently refer to when trading and compiling their digital collection, for example, all K-POP albums and merchandise. Rather than requiring users to manually input the information related to an item when performing an action involving an item, collectors may simply refer to the item found in the master set.
- **Curator:** A collector with administrator privileges who has the authority to maintain the master set. They are site maintainers who are responsible for updating the site, database and anything related to the site. This means adding new items to the inventory when they are released and responding to requests by collectors to add new items to the inventory and review unfair reputation feedback. Since a curator is effectively a collector with additional capabilities, all the use cases of collectors also apply to a curator.
- **Watch List:** A list of items that a collector would like to obtain. This can optionally be public so other collectors can see what kind of trades they would be interested in.
- **Trade post:** A listing made by a collector seeking to bargain with others and exchange items

## Regular Use Cases: Flow-Of-Events Tables

### Use Case 1: Create Collector Account

<b>Name</b>	Create Collector Account
<b>Goal</b>	A guest can join the marketplace as a collector, to be able to track their collection, and trade with other collectors.
<b>Actors</b>	Guest (Logged Out)
<b>Preconditions</b>	The guest does not have an account yet (i.e. no account exists for the same username or email address).
<b>Main flow</b>	The guest selects the “sign up” button on the landing page. The guest inputs a username, email and password. The guest is redirected to the landing page with their account logged in.
<b>Subflow</b>	None
<b>Alternative flow #1 - username already taken</b>	The guest inputs a username that already exists. An error message pops up e.g. “this username is taken, try again”. The guest can try again.
<b>Alternative flow #2 - account with email already exists</b>	The guest inputs a username that already exists. An error message pops up e.g. “this username is taken, try again”. The guest can try again or reset their password (see use case # 3).
<b>Alternative flow #3 - password fails complexity requirements</b>	The guest inputs a password that does not meet minimum password complexity requirements. An error message pops up e.g. “Password must be at least 6 characters”. The guest can try again.
<b>Priority</b>	High (MVP)

## Use Case 2: Login

<b>Name</b>	Login
<b>Goal</b>	A guest can log in, to be able to track their collection and trade with other collectors.
<b>Actors</b>	Guest (Logged Out)
<b>Preconditions</b>	The guest must have an existing account.
<b>Main flow</b>	The guest selects the “log in” button on the landing page. The guest inputs the username and password. The guest is redirected to the landing page with their account logged in. They are now a collector (or a curator depending on their account status).
<b>Subflow</b>	None
<b>Alternative flow #1 - incorrect username</b>	The guest inputs a username that doesn’t exist. An error message pops up e.g. “this username is incorrect.”. The guest can try again or reset their username/password (see use case # 3).
<b>Alternative flow #2 - incorrect password</b>	The guest inputs an incorrect password. An error message pops up e.g. “Incorrect password, try again”. The guest can try again or reset their password (see use case # 3).
<b>Priority</b>	High (MVP)

### Use Case 3: Reset Password

<b>Name</b>	Reset Password
<b>Goal</b>	A guest can recover their password to regain access to their account
<b>Actors</b>	Guest (Logged Out)
<b>Preconditions</b>	The guest must have an existing account.
<b>Main flow</b>	The guest selects the “forgot password” and inputs their email address. An email with their username and link to enter a new password is sent to the guest. The user can follow the email link and enter a new password.
<b>Alternative flow #1 - incorrect email</b>	The guest inputs an email with no account registered. An error message pops up e.g. “There is no account for this email”. The guest can try again or create a new account (see use case # 1).
<b>Alternative flow #3 – weak password</b>	The guest inputs a password that does not meet minimum password complexity requirements. An error message pops up and the guest can try again.
<b>Priority</b>	Medium (MVP)

### Use Case 4: Log Out

<b>Name</b>	Log Out
<b>Goal</b>	A collector can log out of the website.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collectors must be logged in with a valid profile.
<b>Main flow</b>	The collector clicks on a “log out” button. The collector will be redirected to the guest landing page. Their view will then become the same as a guest and they will have the option of logging back in through the login portal.
<b>Subflow</b>	None
<b>Alternative flow</b>	None
<b>Priority</b>	Low (MVP)

## Use Case 5: Customise Collector Profile

<b>Name</b>	Customize Collector Profile
<b>Goal</b>	A collector can customize their profile details
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collectors must be logged in with a valid profile.
<b>Main flow</b>	<p>The collector selects the “Profile” tab to view their profile.</p> <p>The collector clicks an edit button where they can customize various parts of their profile such as their email and profile picture.</p> <p>After making the necessary changes, the collector clicks on a save button and their profile will be updated accordingly.</p>
<b>Subflow</b>	None
<b>Alternative flow # 1 - edits exceed character or size limit</b>	<p>The edits a collector makes to their profile exceed the character or size limit for text and image components, an error message pops up and the collector can try again.</p>
<b>Priority</b>	Medium (MVP)

## Use Case 6: View and Give Reputation Feedback To Other Collectors

<b>Name</b>	Give Reputation Feedback To Other Collectors
<b>Goal</b>	Collectors can establish a reputation in the community as they complete trades with others and share their experiences trading with other collectors.
<b>Actors</b>	Collector # 1 (Logged In)
<b>Preconditions</b>	Collector # 1 must be logged in with a valid profile. Collector # 1 must be viewing the profile of collector # 2, for whom they wish to submit reputation feedback. Collector # 1 must not be the same as collector # 2. Collector # 1 must not have given collector # 2 feedback ever before.
<b>Main flow</b>	Collector # 1 selects the “reputation” tab of collector # 2’s profile. Collector # 2’s reputation info will be displayed. Collector # 1 can make a reputation submission in the form of a ‘thumbs up’ (approval) or ‘thumbs down’ (disapproval). Collector # 1 will then be prompted to attach a comment and where possible evidence of a particular trade completed with collector # 2. This reputation feedback will then appear in the ‘reputation’ section of collector # 2’s profile.
<b>Subflow</b>	The reputation statistics (i.e. total number of ‘thumbs up’ and ‘thumbs down’) of the collector’s profile will be updated to reflect the new reputation feedback submission.
<b>Alternative flow #1 - no comment provided</b>	Collector # 1 does not input a comment with their reputation feedback. They will not be able to proceed with it until they input a comment.
<b>Alternative flow #2 - reputation feedback already given</b>	Collector # 1 has given collector # 2 feedback before. The “add feedback” button does not appear when collector # 1 is viewing collector # 2’s profile. This is because a collector may only provide reputation feedback to another particular collector once.
<b>Priority</b>	High (MVP)

## Use Case 7: Dispute Reputation Feedback

<b>Name</b>	Dispute Reputation Feedback
<b>Goal</b>	To uphold the integrity of the feedback system, individuals may report a feedback submission made on their profile to the curators for review if they believe it is unjustified. The curator can choose to remove the flagged feedback from the collector's profile.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collector and curator must be logged in with a valid profile. Collectors must have at least one reputation feedback on their profile. Collector must be viewing their profile.
<b>Main flow</b>	Collector selects the "reputation" tab on their profile. Each reputation comment will have a flag icon beside it where the collector can report the feedback if they believe it to be unjustified. They will then be required to complete a form detailing reasons the feedback should be removed which are then sent for review by curators. The curator can review the request in the Admin panel - reputation review section. The curator can delete this feedback from the collector's profile. The curator then closes the request. The collector will be notified of the outcome.
<b>Subflow</b>	None
<b>Alternative flow #2 - too little or too much information given</b>	The collector is making a report that has too little or too many characters. An error message will arise informing them as to this fact. They will be prompted to try again afterwards.
<b>Alternative flow #2 - already reported a reputation submission</b>	If a collector has already reported a reputation submission. An error message pops up e.g. "Please wait while a curator reviews this report".
<b>Priority</b>	Low (Non-MVP)

## Use Case 8: Promote Collector To Curator

<b>Name</b>	Promote Collector To Curator
<b>Goal</b>	Curators can expand the number of curators as the site scales.
<b>Actors</b>	Curator (Logged In)
<b>Preconditions</b>	The curator must be logged in with a valid profile. The collector account being promoted must not yet have curator status.
<b>Main flow</b>	From the administration panel, the curator may search and select for collectors to promote to curators.
<b>Subflow</b>	The system will send a notification to the promoted collector. The first time the promoted collector, now a curator, views this notification - confetti will rain down their window!
<b>Alternative flow #1 - account already has curator status</b>	If the account being promoted already has curator status, they will not be able to change this.
<b>Priority</b>	Low (non-MVP)

## Use Case 9: View A Collector's Entire List Of Collected Items

<b>Name</b>	View Another Collector's Entire List Of Collected Items
<b>Goal</b>	Collector # 1 can view all the items across all collections owned by collector # 2, to motivate trade and communication.
<b>Actors</b>	Collector # 1 (Logged In)
<b>Preconditions</b>	Collector # 1 must be logged in with a valid profile. Collector # 1 must be viewing the profile of collector # 2, whose items collector # 1 wants to see. Collector # 1 can be the same as collector # 2.
<b>Main flow</b>	Collector selects the "Items" tab on collector # 2's profile. A list of all the items owned across all collections by collector # 2 will be displayed.
<b>Subflow</b>	None
<b>Alternative flow #1 - collector has no items</b>	If the selected collector profile has no items in their digital collection, a message eg. "<Username> has no items yet!" will be displayed.
<b>Priority</b>	Low (non - MVP)

## Use Case 10: View All Collections

<b>Name</b>	View All Collections
<b>Goal</b>	A collector can view all existing collections, to browse what is available.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collectors must be logged in with a valid profile.
<b>Main flow</b>	<p>The collector selects the “Collections” tab on the main menu bar.</p> <p>The main collections page is displayed with the list of all available collections.</p> <p>Any collections where the user has all items are marked with a “tick” icon.</p> <p>Any collections where the user has some items are marked with an “hourglass” icon.</p>
<b>Subflow</b>	<p>The collector can toggle between “All collections” and “My collections” on the main collections page to filter the shown collections.</p> <p>The “My collections” view only includes collections where the collector has at least one item in that collection.</p>
<b>Alternative flow #1</b>	<p>The collector has no items and selects “My collections” mode.</p> <p>A message “You haven’t collected any items yet. Start collecting!” will be displayed.</p>
<b>Priority</b>	High (MVP)

## Use Case 11: View A Single Collection

<b>Name</b>	View a Single Collection
<b>Goal</b>	A collector can view all items in a specific collection, to see what items are available and what items they already have.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile and be viewing the main collections page (see use case 10).
<b>Main flow</b>	Inside the “Collections” screen, the collector clicks on a specific collection. A list of all items inside that collection will be displayed. Any items the user already has been marked with a “tick” icon.
<b>Subflow</b>	The collector can toggle between “All items” and “My items” on the collection page to filter the shown items. An item is included in the “My items” view if the collector has added that item to their item list. In the “My items” view, no items are denoted with ticks (as this would be redundant).
<b>Alternative flow #1</b>	The collector is in “My items” mode but does not have any items in the collection. A message “You haven’t collected any items in this collection. Start collecting!” is displayed.
<b>Priority</b>	High (MVP)

## Use Case 12: View A Single Item

<b>Name</b>	View A Single Item
<b>Goal</b>	A collector can view an item in full detail, including recent active trades of that item.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collector must be logged in with a valid profile and be viewing either a collection (see the use case 11) or a trade involving the item (see the use case 20)
<b>Main flow</b>	<p>After clicking on an item picture in either of the above flows, the collector is taken to the item's item page.</p> <p>All details are displayed on the item page: the item's picture, name, release date etc, and recent active trades involving the item.</p> <p>Buttons are displayed to add/remove the item from the collector's collection and to add/remove the item from their watch list.</p>
<b>Subflow</b>	None
<b>Priority</b>	High (MVP)

## Use Case 13: Update Personal Collection

<b>Name</b>	Update Personal Collection
<b>Goal</b>	A collector can update their digital collection to help them keep track of all their items, either by adding or removing items.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile and the collector must be viewing the item's detailed view (see use case 12).
<b>Main flow</b>	When viewing a single item the collector can click on an 'add item' or 'remove item' button to update their collection. Only the relevant button will be displayed. Their collection will be updated to reflect these changes thereafter.
<b>Subflow</b>	None
<b>Alternative flow # 1 - the desired item not listed</b>	If the desired item cannot be found, a user may submit a new item request (see use case 24).
<b>Alternative flow #2 - an item to remove exists as part of an active trade</b>	If the collector selects an item to remove that is part of one of their active trades, an error will arise informing them as to this fact. They will be required to close that trade first before they can proceed with removing the item.
<b>Priority</b>	Medium (MVP)

## Use Case 14: View Collector Profile

<b>Name</b>	View Collector Profile
<b>Goal</b>	Collectors can view their or another collector's profile, including details such as reputation, watch list and trades (and optionally items).
<b>Actors</b>	Collector #1 (Logged In)
<b>Preconditions</b>	Collectors must be logged in with a valid profile. For Collector # 1 to view the profile of Collector # 2, they must be viewing a trade created by collector # 2 or a comment made by collector # 2 on a trading post.
<b>Main flow</b>	For Collector # 1 to view their profile they must select the "Profile" tab where they will be directed to their profile details and access other tabs of information such as their reputation, watch list, trades, and items. For Collector # 1 to view the profile of Collector # 2 they must select the username of Collector # 2 as found in a trading post or a comment
<b>Subflow</b>	None
<b>Alternative flow</b>	None
<b>Priority</b>	High (MVP)

## Use Case 15: View Watch List

<b>Name</b>	View Watch List
<b>Goal</b>	The watch list allows a collector to note down particular items of interest so that they receive notifications whenever a trade with these items is posted. Collectors can view a watch list.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collector # 1 must be logged in with a valid profile. Collector # 1 must be viewing the profile of collector # 2. Collector # 1 can be the same as collector # 2.
<b>Main flow</b>	Collector selects the "Watch List" tab on collector # 2's profile. The watch list will be displayed.
<b>Subflow</b>	Whenever a trade is posted that concerns an item included in collector # 1's watch list, collector # 1 received a notification via profile and email
<b>Alternative flow</b>	None
<b>Priority</b>	Medium (non-MVP)

## Use Case 16: Update Watch List

<b>Name</b>	Update Watch List
<b>Goal</b>	The watch list allows a collector to note down particular items of interest so that they receive notifications whenever a trade with these items is posted. Collectors can remove any item from their watch list.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile and the collector must be viewing the item's detailed view (see use case 12).
<b>Main flow</b>	When viewing a single item the collector can click on an 'add to watch list' or 'remove from watch list' button to update their watch list. Only the relevant button will be displayed. Their watch list will be updated to reflect these changes thereafter.
<b>Subflow</b>	Whenever a trade is posted that concerns an item included in the collector's watch list, a notification of this trade will be sent to the collector's profile and email.
<b>Alternative flow # 1 - the desired item not listed</b>	The collector can request an item be added to the site master set (see use case 24).
<b>Priority</b>	Medium (non-MVP)

## Use Case 17: Create New Trade

<b>Name</b>	Create New Trade
<b>Goal</b>	Collectors can exchange an unwanted item for a desired one.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Collectors must be logged in with a valid profile. At least one unwanted item for trading must exist in the collector's digital inventory. At least one desired item must be chosen from the master set of items.
<b>Main flow</b>	Collector clicks on a "new trade" button to make a trade request. The collector will then select the unwanted item and desired item(s) and input the unwanted item condition, trade title and trade description. The trade will then be placed under the "trade" section of the website and other collectors will be able to see it. It will also appear in the collector's profile - trades tab and will become searchable by other collectors.
<b>Subflow</b>	None
<b>Alternative flow #1 - no items found or selected in the collection, or no desired items selected</b>	A collector does not have or select any items for trade or does not choose any desired items so the trade request is rejected. The system will raise the relevant error message with instructions on how to ensure the trade request is valid, and the collector is prompted to try again.
<b>Alternative flow #2 - trade concerning the same items already exists</b>	Collector chooses items to trade and desired items that exactly match one of their existing active trades already. The system will issue an error message to the collector about this.
<b>Priority</b>	High (MVP)

## Use Case 18: Search For Trades

<b>Name</b>	Search For Trades
<b>Goal</b>	Allow a collector to search for active trades
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile, and the retrieved trades must still be active and not yet closed
<b>Main flow</b>	After clicking the “search trades” button, the collector will be able to filter for trades on the website by selecting items that a collector might have and items they may want. A list of trades matching these criteria will then be retrieved and displayed to the collector, ordered by how recently they have been posted.
<b>Subflow</b>	Pagination may be used to spread these results across multiple pages for viewing once the total number of trades becomes too excessive to view in one single page. collectors may view more trades by selecting the relevant page number
<b>Alternative flow #1 - no suitable trades found</b>	If no existing trades can be found where other collectors have or want the selected items, a message will be displayed informing collectors as to this fact and will prompt them to search again with different inputs
<b>Alternative flow #2 - not enough items selected for trade search</b>	If the collector does not select at least one desired item and at least one item looking to be exchanged, an error message will be displayed informing the collector that at least one item from each section must be selected and will prompt them to search again.
<b>Priority</b>	Medium (MVP)

## Use Case 19: View A Given Collector's Trades

<b>Name</b>	View All Collector Trades
<b>Goal</b>	Allow a collector to view all trades (both active and closed) made by other collectors and themselves
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile, and the collector must be viewing their or another collector's profile
<b>Main flow</b>	Upon clicking the "trades" section of a collector's profile, the collector will be presented with a list of the most recent trades posted by that collector. This will use a high-level view where each trade post thread and their date can be accessed. If collectors wish to view a particular trade post at a more granular level, they can do so by clicking the trade and the website will forward them there
<b>Subflow</b>	Pagination may be used to spread the trades across multiple pages for viewing once the total number of trades becomes too excessive to view in one single page. collectors may view more trades by selecting the relevant page number
<b>Alternative flow #1 - no trades posted</b>	No existing trades by the selected collector can be found. A message will be displayed informing collectors as to this fact
<b>Priority</b>	High (MVP)

## Use Case 20: View And Comment On An Active Trade

<b>Name</b>	View And Comment On An Active Trade
<b>Goal</b>	Facilitate bargaining for trade by allowing collectors to make offers and counter-offers in the form of comments on a trading post
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile. The trading post must still be active and not yet closed, and collectors viewing a trading post must have the desired items listed to make a comment
<b>Main flow</b>	Collectors can comment on a trading post that will be time-stamped and marked with their account. Each new comment made by a unique collector will create its comment chain which will allow others to respond and participate in a negotiation process or will continue a comment chain started by another collector if they comment on an existing chain
<b>Subflow</b>	Collectors may expand and collapse comment chains for easier navigation of the trade and to make the view less cluttered as they see fit. If the collector is the person who has made the trading post, they will not be able to make standalone comments. They may only reply to the offers made by other collectors
<b>Alternative flow #1 - collector does not have matching desired items</b>	If a collector has no items or does not have the items matching what the owner of the trading post desires, they will not be able to post. A warning message will be issued informing the collector about this.
<b>Alternative flow #2 - trade is closed and archived</b>	If a trade has been closed and archived, no commenting will be possible. A warning message will be issued for this.
<b>Priority</b>	High (MVP)

## Use Case 21: Bookmark Trade Post

<b>Name</b>	Bookmark Trade Post
<b>Goal</b>	Allows a collector to keep track of multiple active trade posts and access them all in a centralized location.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile. The trade must be active and issued by a collector other than the collector. Collector must be logged in with a valid profile and be viewing the trade either in a list of trades (see use case 18 or 19) or a detailed view (see use case 20)
<b>Main flow</b>	The collector selects the bookmark icon appearing on another collector's trade post, which is available on any of the above screens. The trading post will then be recorded and accessible in the collector's bookmarked trades.
<b>Subflow</b>	None
<b>Alternative flow #1 - trade already bookmarked</b>	If the trading post is already bookmarked, the icon on the trading post will show this. The collector selects the bookmark icon and it will become unbookmarked and will no longer appear in the collector's list of bookmarked trades.
<b>Priority</b>	Medium (MVP)

## Use Case 22: Close A Trade Post

<b>Name</b>	Close A Trade Post
<b>Goal</b>	Allow a collector to signify to others that a particular trade has been completed or that they no longer wish to trade for a particular set of items.
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile. The collector must be viewing a trading post that is active and must be the creator of that trading post.
<b>Main flow</b>	A collector clicks on the “close trade” button in an active trade post they have created. The trading post will be closed for commenting and archived
<b>Subflow</b>	Before the trade is closed, the collector is prompted to select who is the bidding winner among all collectors who have commented on the trading post. If it is possible, they will be further prompted to provide reputation feedback (as per use case #5) based on the completion of the trade. If no bidding winner is selected, then the main flow will proceed as usual.
<b>Priority</b>	Medium (MVP)

## Use Case 23: View Most Recent Trades On Landing Page

<b>Name</b>	View Most Recent Trades On Landing Page
<b>Goal</b>	Allow a collector to view the most recent active trades made by other collectors and themselves
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile and on the landing page
<b>Main flow</b>	The landing page will have a high-level view where each trade post thread and their date can be viewed. If collectors wish to access a particular trade post at a more granular level, they can do so by clicking the trade and the website will forward them there
<b>Subflow</b>	Pagination may be used to spread the trades across multiple pages for viewing once the total number of trades becomes too excessive to view in one single page. collectors may view more trades by selecting the relevant page number
<b>Priority</b>	Medium (MVP)

## Use Case 24: Request To Add New Items To Master Set

<b>Name</b>	Request To Add New Items To Master Set
<b>Goal</b>	Collectors can send a request to add a new item to a new or existing collection so that it can be recognized and tradable on the marketplace
<b>Actors</b>	Collector (Logged In)
<b>Preconditions</b>	Must be logged in with a valid profile
<b>Main flow</b>	A collector may click on the “send item request” button where they will be prompted to complete a form to add a new item to the master set of items recognized on the website. They will then await the outcome of their request after a curator has approved or rejected it.
<b>Subflow - outcome of request</b>	After a curator accepts or rejects the new item request and provides justification for it, the collector will be informed of this outcome via notification.
<b>Alternative flow #1 - not enough or too much detail in request</b>	If the new item request contains too little or too many details (e.g. insufficient or excessive characters), an error will arise informing the collector as to this fact. They will then be prompted to input the request details again.
<b>Priority</b>	Low (MVP)

## Use Case 25: Respond To Request To Add New Items To Master Set

<b>Name</b>	Respond To Request To Add New Items To Master Set
<b>Goal</b>	To ensure that the trading community have a pleasant experience and moderating any unacceptable behaviour
<b>Actors</b>	Curator (Logged In)
<b>Preconditions</b>	There must be a request submitted by a collector to add a new item
<b>Main flow</b>	Curators will have an additional section under the administration panel where they can review submissions by collectors to add new items to the master set. Curators will need to either accept or reject a submission. If a request is accepted, the curator adds the relevant information and images to the database and the item will then become part of the master set.
<b>Subflow - collector informed of outcome</b>	After a curator accepts or rejects the new item request made by a particular collector, that collector will be informed of the outcome.
<b>Alternative flow #1 - no requests</b>	If there are no requests submitted by collectors, a message will be displayed indicating this fact.
<b>Priority</b>	Low (MVP)

## Use Case 26: Trade Of The Day

<b>Name</b>	Trade Of The Day
<b>Goal</b>	To showcase a trade post to promote collector activity on the website
<b>Actors</b>	System
<b>Preconditions</b>	The trade chosen to be trade of the day must not have received that status before
<b>Main flow</b>	Each day, a trade is randomly chosen from a lottery pool to be highlighted to all collectors as the trade of the day. This will be accessible and viewable by all collectors of the website at the start of the landing page
<b>Subflow</b>	A collector who has had their trade become trade of the day will be notified of this event. However, once a trade has had the opportunity to be marked as the trade of the day, it will be removed from the lottery pool and cannot obtain that status again.
<b>Alternative flow #1 - no possible trade of the day</b>	If no trade post can be designated as trade of the day (i.e. all trades on the website have had that status before and the lottery pool is empty), then all trades will be added back into the lottery pool and the main flow will proceed as usual.
<b>Priority</b>	Low (non-MVP)

## Misuse Cases: Flow-Of-Events Tables

### Use Case 27: Preventing Abuse Of New Trade Requests

<b>Name</b>	Preventing Abuse Of New Trade Requests
<b>Goal</b>	To prevent collectors from abusing the trade request function and dominating the trades shown on the landing page with their own trades
<b>Actors</b>	System
<b>Preconditions</b>	collectors must be logged in, and must be attempting to create a new trade post.
<b>Main flow</b>	After a collector successfully makes a trade request, they will be informed of the number of remaining trade requests for that day.
<b>Subflow</b>	None
<b>Alternative flow #1 - trade limit exhausted</b>	If the collector exhausts their daily limit of trades, an error message will arise informing them that they cannot issue any new trades for a given timeframe.
<b>Priority</b>	Medium (MVP)

### Use Case 28: Responding to Request To Flag Feedback

<b>Name</b>	Preventing Abuse Of Reputation Feedback
<b>Goal</b>	To prevent collectors from abusing the feedback function to provide excessive positive or negative feedback about other collectors
<b>Actors</b>	Curator (logged in)
<b>Preconditions</b>	Curator must be logged in with a valid profile.
<b>Main flow</b>	From the administration panel, the curator can view and select open requests. Curator reviews request and inputs decision and reason.
<b>Subflow</b>	Both the collector who left the feedback and the collector who flagged the feedback receive a notification with a curator's decision and reason.
<b>Alternative flow</b>	None
<b>Priority</b>	Low (non - MVP)

## Use Case 29: Preventing Abuse Of Reputation Feedback

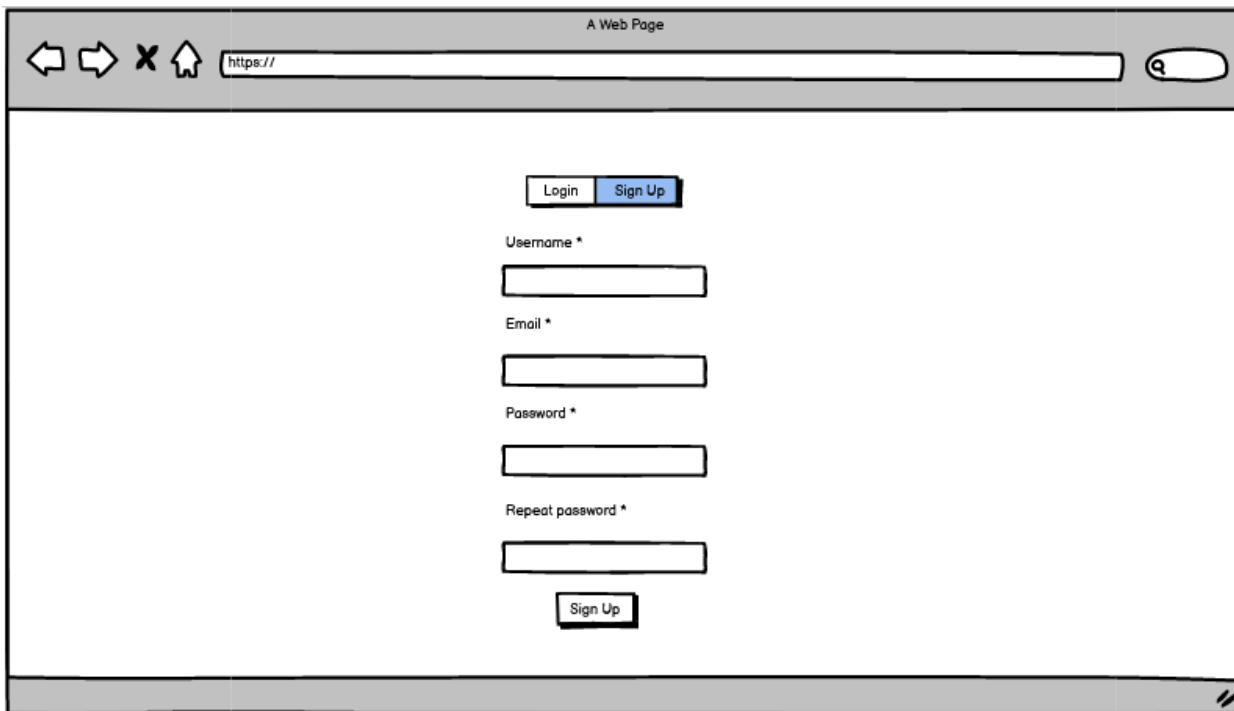

<b>Name</b>	Preventing Abuse Of Reputation Feedback
<b>Goal</b>	To prevent collectors from abusing the feedback function to provide excessive positive or negative feedback about other collectors
<b>Actors</b>	System
<b>Preconditions</b>	collector must be logged in and attempting to make a reputation feedback submission to another collector
<b>Main flow</b>	When a collector successfully makes a reputation feedback submission for another collector, they will be informed that they cannot make any further feedback submissions for that particular collector.
<b>Subflow</b>	None
<b>Alternative flow #1 – duplicate feedback</b>	If a collector attempts to give reputation feedback for a collector despite having already done so in the past for that collector, an error message will arise informing them as to this fact. The collector will be unable to complete this reputation feedback submission.
<b>Priority</b>	Medium (MVP)

## Use Case 30: Preventing Abuse Of New Item Requests

<b>Name</b>	Preventing Abuse Of New Item Requests
<b>Goal</b>	To prevent collectors from abusing the new item request function and wasting the time and resources of curators
<b>Actors</b>	System
<b>Preconditions</b>	Collector (Logged In) must have submitted a new item request
<b>Main flow</b>	After a collector successfully makes an item request, they will be informed of the number of remaining requests they may submit for that day.
<b>Subflow</b>	None
<b>Alternative flow #1 - item request limit exhausted</b>	If the collector exhausts their daily limit of new item requests, an error message will arise informing them that they cannot submit any new requests for a given timeframe.
<b>Priority</b>	Medium (MVP)

This screenshot shows a web browser window titled 'A Web Page' with the URL 'https://Collection\_Central.com/'. The navigation bar includes links for Home, Profile, Collections, Trades, Notifications, and Admin. The 'Profile' link is highlighted. Below the navigation bar, there is a section for updating the watchlist. It features a tabbed interface with 'Items', 'Reputation', 'Trades', 'Bookmarked Trades', and 'Watch List'. The 'Watch List' tab is active, displaying a list of three items: 'Item A', 'Item B', and 'Item C'. Each item has a small 'x' icon next to it, likely for removal. To the left of the watchlist, there is a placeholder for a profile picture and three buttons: 'Change Image', 'User name', and 'Edit Profile'.

This screenshot shows a web browser window titled 'A Web Page' with the URL 'https://Collection\_Central.com/'. The navigation bar is the same as in the previous screenshot. The 'Create New Trade' form is displayed. It includes a 'Trading item(s)' section with a dropdown menu labeled 'Select item(s)' and three placeholder images. Below this is a 'Desired item(s)' section with another dropdown menu labeled 'Select item(s)' and three placeholder images. To the right, there are fields for 'Title:', 'Condition:' (with a dropdown menu showing 'Immaculate'), and 'Description:'. Each of these fields has a small edit icon. At the bottom right, there are 'Cancel' and 'Submit' buttons.
